

## **CFS APPOINTS QUEST TECHNOLOGY AS ITS ASIAN REPRESENTATIVE**

CHANHASSEN, MN (January 5, 2006) - Custom Fab Solutions, LLC (CFS), a custom plastic/metal fabricator and systems integrator serving technology industries, has appointed Quest Technology as its representative for Singapore, Malaysia, Hong Kong, China, Thailand and the Philippines.

"We sought a company to represent our products and services in Asia so we could meet the increasing demands of our ever-expanding disk drive and semiconductor markets," said Bill Braunwarth, CFS director of sales and marketing. "Quest Technology, a well-established and highly respected organization, with 20 years of experience, met the requirements we were seeking."

Quest Technology, a regional leader in micro-contamination control engineering services, is staffed with a team of more than 150 dedicated service personnel of whom half are engineering professionals. "The products and services currently offered by Quest complement those provided by CFS," said Braunwarth. "Quest will lend its considerable expertise to represent our products and services by providing sales, installation, start-up and post-sales support."

Quest Technology expects the relationship with CFS will allow it to extend its product lines as well. "Through this partnership, we can extend product lines such as the PMS range of particle counters," said H. T. Tan, managing director of Quest Group. "Working together, we will better serve and meet the ever increasing challenges of the hard disk and semiconductor markets."

"We anticipate that with Quest Technology's support, we can expand further into Asian markets - wherever precision and contaminant-free material/products are required," said Braunwarth.

**About Custom Fab Solutions.** CFS is a Minneapolis-based fabricator of plastics, Teflon® and PFA. The company offers metal fabrication, electro-polishing services and is a systems integrator serving technology markets. The company combines its capabilities with its customers' needs to integrate customer-specified instrumentation and controls into a ready-to-use product. CFS primarily serves the semiconductor, disk drive, electronics, medical, pharmaceutical and aerospace industries, where precision and contaminant-free material/products are required.
