

## **CFS SELLS ADVANCED DI WATER TREATMENT SYSTEM TO DISK DRIVE MANUFACTURER**

CHANHASSEN, MN (July 7, 2008) - Custom Fab Solutions, LLC (CFS), a custom plastic/metal fabricator and systems integrator serving technology industries, announced a multiple system order from a California-based Disk Drive manufacturer.

The new system will sterilize, filter micro-contaminates and remove dissolved gases from a DI water flow stream. Un-controlled amounts of dissolved gasses cause adverse disk drive production process results and create micro-bubbles which affect accurate particle measurements. The product utilizes a micro-controller to dynamically monitor and control the levels of dissolved gases in a DI Water flow stream.

“We were very pleased with this order as it showcases CFS’ technical and manufacturing capabilities,” said Bill Braunwarth, CFS Director of Sales and Marketing. “The resources and expertise to design, manufacture and test products are services that existing customers have come to rely upon and new customers seek. These capabilities continue to highlight CFS’ worldwide technical product successes.”

**About Custom Fab Solutions.** CFS is a Minneapolis-based contract manufacturer serving technology markets. The company is vertically integrated and specializes in Teflon®, PFA and thermoplastic fabrication. The company has expertise in metal fabrication, electro-polishing and other surface treatment services. The company combines its capabilities with customer needs to integrate instrumentation and controls into a ready-to-use product. CFS primarily serves the photovoltaic, medical, pharmaceutical, semiconductor, disk drive, aerospace, food and electronics industries, where precision and contaminant-free material/products are required. The company web site is located at: [www.CustomFabSolutions.com](http://www.CustomFabSolutions.com).
